

AS-BUILTS / FIELD VERIFICATION PROGRAMS Various Clients

- Document control
- Design & drafting
- Instrumentation & controls engineering
- Project engineering

As-builts / field verification projects are crucial to ensure the accuracy and completeness of critical project drawings. Based on our client's As-Built requirements, Federation's Document Control (DC) team will coordinate with Federation's Design / Drafting Team and Project Engineering Team to ensure all required as-built field markups are received and incorporated into the final master drawings. Once the drawings are drafted, reviewed, and approved, Federation's DC will distribute them to our client for their project completion records. With our expert knowledge and attention to detail, we help ensure that projects are completed accurately and efficiently.
